

ASHLESHA CHAUHAN

📞 +91 7307697355 | ✉️ chauhanashlesha980@gmail.com | 🔗 LinkedIn | 🐙 Github | 🚀 Leetcode

Full Stack Developer specializing in MERN stack and AI-powered applications, with experience building scalable real-time systems, Generative AI integrations, and secure backend architectures. Strong foundation in DSA, REST APIs, and modern web technologies with proven hackathon achievements.

Technical Skills

- Programming Languages:** C++, JavaScript (ES6+), Python
- Frontend:** React.js, Next.js, HTML5, CSS3, Tailwind CSS
- Backend:** Node.js, Express.js, RESTful API Design & Integration
- AI/ML & Generative AI:** LLMs, Transformer Architecture, Neural Networks, Deep Learning, Embeddings, Text Summarization, Custom Model Training & Evaluation
- Cloud & Tools:** AWS, Git, GitHub, VS Code, Postman
- CS Fundamentals:** Data Structures & Algorithms, Object-Oriented Programming (OOP), Operating Systems, DBMS

Academic Qualification

Dr. A.P.J. Abdul Kalam Technical University (AKTU)	2023 – Present
Bachelor of Technology in Computer Science Engineering (CSE)	
Heliger Borden Education Centre, Kanpur, UP	
ISC (XII), 2023	72.20%
ICSE (X), 2021	87%

Project

Vitara Real Estate 🚀	Apr 2025 - May 2025
- Built a full-stack real estate platform using MERN stack with AI-powered property recommendations and smart search functionality. - Developed an intelligent chatbot for automated property queries and lead management using Generative AI and LLM integration. - Implemented AI-driven pricing insights and automated property description generation, reducing manual content effort significantly.	
SafeCrowdAI 🚀	Nov 2025 - Present
- Built a real-time AI-based crowd monitoring system using computer vision for crowd density analysis and safety surveillance. - Implemented AI-based alert features for overcrowding detection and improved public safety monitoring. - Developed backend services and RESTful APIs for processing crowd data and displaying live analytics on a web dashboard.	
Offline UPI 🚀	Feb 2026 - Present
- Built an offline UPI payment system routing encrypted packets device-to-device via a Bluetooth mesh until a bridge node reaches internet and uploads to the backend. - Implemented hybrid RSA-OAEP + AES-256-GCM encryption ensuring intermediaries cannot read or tamper with payment data in transit. - Solved duplicate settlement using atomic idempotency on SHA-256 ciphertext hashes, ensuring a payment is debited exactly once even across simultaneous bridge uploads. - Added replay attack prevention via 24-hour freshness checks and UUID nonces, with optimistic locking and a unique DB index as defense-in-depth against double settlement.	

Achievement & Certification

- SafeCrowdAI - Reached the Semi-Finals of the ET GenAI Hackathon 2026, organized by The Economic Times in collaboration with Avataar, competing among 55,000+ teams across the country. - SafeCrowdAI - Qualified for the State-Level Buildathon at the NxtWave Buildathon Competition, ranked among the top projects statewide. - Solved 300+ Data Structures & Algorithms problems on LeetCode, demonstrating strong problem-solving and algorithmic thinking skills.	
• ET - AI Hackathon 2026	May 2026
• Full Stack - Udemy	May 2026
• React JS - Simplilearn	Mar 2026
• Python Infosys Springboard	Mar 2025
